

newleaf is Newfoundland & Labrador's green economy conference, focusing on the products, services, technologies, policies, and innovations in the province that can help build our economy and protect, mitigate effects to, or even enhance the natural environment in the process.

The **green economy** and the **clean technologies** which drive it, represent a significant path for economic diversification and growth for Newfoundland and Labrador. The environmental challenges the province faces are business opportunities that can be met locally, and shared with the rest of the world

Your **partnership** helps **newleaf** provide the programming and supports necessary to help firms in the province seize those opportunities.
